The final touch of artistic beauty in the home

Eye Comfort Lighting System

No home, however beautiful in architectural design and finish, is complete without a lighting system that displays and accentuates these features. Every room should have a light that allows a full appreciation of the room as a whole, and at the same time be comfortable to the eyes.

The Eye Comfort Lighting system brings out the architectural beauty of the home and adds a pleasing effect to the decorations. It is the only scientific indirect lighting. It produces a clear, glareless light, spread uniformly over the room—ample for every purpose and healthy for the eyes. The bare tungsten lamps are always hidden in opaque silvered mirror X-Ray Eye Comfort Reflectors—which are made of crystal glass in one piece—plated with pure silver, forming a reflecting surface of the highest known reflecting power. Without X-Ray Eye Comfort Reflectors it is impossible to produce a light equally beautiful.

Every installation of Eye Comfort Lighting is a convincing demonstration of its superiority over all other systems—whether direct, indirect or the so-called “semi-indirect.”

Whether the enclosing decorative bowl is of glass, metal, silk-lined wicker or what not is a matter of decoration only. The perfect results are all in the X-Ray Comfort Reflectors.

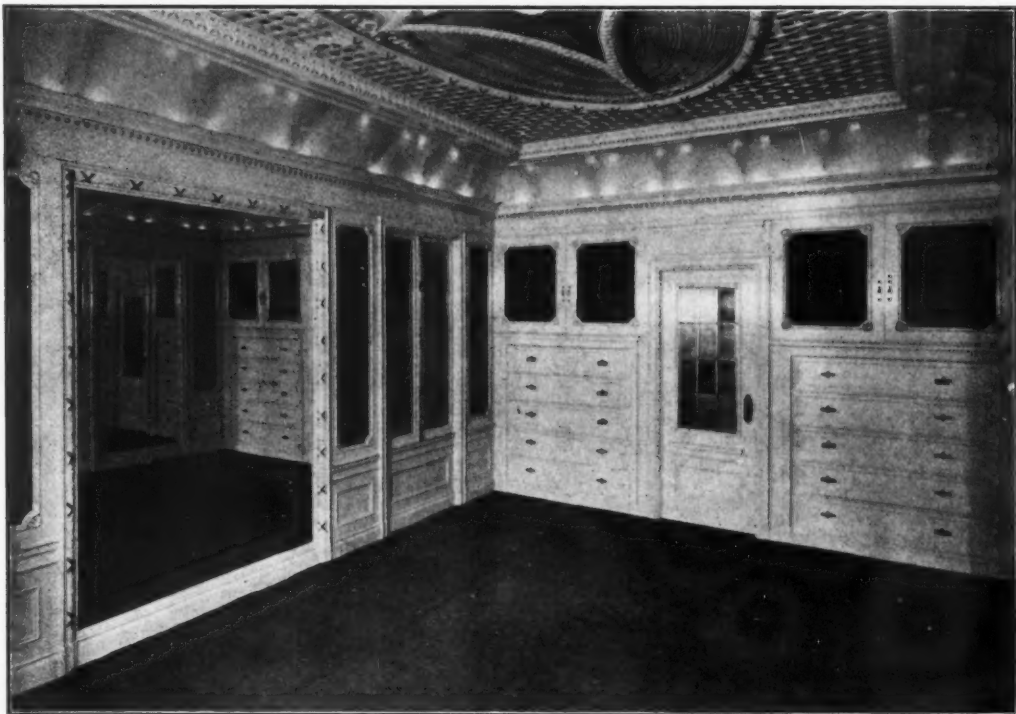

Genuine X-Ray Eye Comfort Lighting may be had in many forms, such as pendant, opaque or luminous bowls, portable lamps, lighting from cornices, urns or pedestals.

Our New York Offices, located in the Craftsman Bldg., 6 East 39th Street, are prepared to give complete service.

If you are interested in more beautiful interior decorations send today for our booklets, “Correct Practice in Control of Light,” and “The Lighting of the Home.” They contain authoritative information on scientific illumination.

Kahn System Flat Ceiling of Floretyle Construction, Packard Service Building, Los Angeles, Cal. Parkinson & Bergstrom, Architects.

Kahn System Flat Ceilings

Handsome flat ceilings of wide span—without projecting beams or brackets—are features of the several types of construction included in Kahn System. Reinforced solid concrete, hollow terra cotta tile and steel Floretyles, as used for flat ceilings, meet every requirement of modern buildings—efficiently, simply and economically.

Kahn System covers the entire field of permanent fireproof constructions, from garage to industrial plant, from residence to skyscraper.

We will gladly explain our various constructions and their application to any building. *Write for literature and suggestions, FREE.*

High Priced Coal Is Unnecessary

A Kewanee Smokeless Firebox Boiler will burn Bituminous Coal smokelessly. So even in the many cities, where smoke is prohibited the cheaper bituminous coals can be used in a Kewanee Smokeless instead of the high priced Anthracite which must be used in the ordinary boiler to secure smokeless results.

And a Kewanee Smokeless Firebox Boiler will be the means of reducing fuel bills to a large extent.

KEWANEE Smokeless Firebox Boilers

Apartment Bldg., 3 East 85th St., New York City.
Fullerton & Weaver Realty Co., Owners.
Kewanee Smokeless Firebox Boiler Installed.

burning Bituminous Coal, at an average price of \$3.50 per ton, will make the following *savings* over ordinary boilers using various grades of Anthracite.

28% compared with the ordinary boiler using Buckwheat, steam grade at \$3.75; a saving of 45% compared with the ordinary boiler using Anthracite Pea at \$4.75; and a saving of 54% compared with the ordinary boiler using prepared sizes of Anthracite at \$6.50.

These are facts which we want to prove to you. Will you give us the opportunity?

The above figures were obtained by comparing actual coal costs of various boiler installations in New York City.

Fenestra
SOLID STEEL WINDOWS

A. Shrader & Sons Co., Ltd., Brooklyn, N.Y.

Turner Construction Co. New York, Builders.

Capital in Sunlight

THE rise of dividends keeps pace with the welfare of the workers. Plenty of sunlight and fresh air mean bigger production at less cost.

FENESTRA—the combinable windows of solid steel, fitted with removable and adjustable ventilators—at no greater first cost, take the place of walls, and flood your building interior with air and sunlight from floor to ceiling! Their price competes with wood sash and they represent absolute fire-safety and security from wind and weather.

Elegance of exterior, with strength indestructible; reduced lighting bills, low insurance rates and added output—these are some of the *practical* arguments that make Fenestration a business *essential*.

Fenestra Windows have a wonderful record and fill a universal need. In the largest factory or the smallest school they raise the standard of health and mental and moral efficiency. We shall be glad to send full particulars. Write for catalog.

Detroit Steel Products Company Dept. 66 Detroit, Michigan

You—the Deciding Factor

Our general advertising will make many of your clients determine to install Brascolites; but your endorsement or unfavorable criticism will be a deciding factor in many cases.

You are going to see to it that your clients get the best—right. Then we ask that you inform yourself on Brascolites so they may.

Here are some salient features as we tell them to the consumer—

BRASCOLITE
For Better Light
With Less Current Consumption

EVERY Office, Factory, Hotel, Library, Restaurant, Hospital, Store, Church should install this lighting system.

Brascolite gives a shadowless, white, uniform, soft light—a combination of diffused and reflected light—diffusion from the bowl and reflection from the depolished white plane of the fixture ceiling. It has been proved by the best way to know Brascolite is the intimate way—day to day and night to night, your own personal experience with it. That will best teach you what it will do for you in your business or professional connections—so—

Put a Brascolite In Your Library, Billiard Room

Try It For 60 Days

Check Off on List Below

Business You're Identifying

TAKEN WITHOUT FLASHLIGHT—JUST BRASCOLITE. BEAVER BOARD OFFICES—THESE PHOTOS ARE NOT RETOUCHE—THE FIXTURE, AS IT WERE, CARRIES ITS OWN reflected light and 50% more efficient than direct light. The best way to know Brascolite is the intimate way—day to day and night to night, your own personal experience with it. That will best teach you what it will do for you in your business or professional connections—so—

We ask you to take advantage of this offer—for home, private office or draughting room.

"Indian Hunter"

by

J. Q. A. Ward, Sculptor

To be unveiled in Urbana, Ohio, June 29th, 1914

Cast by

Jno. Williams, Inc.

Bronze Foundry

New York

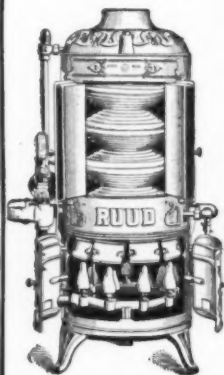

Mrs. John Quincy Adams Ward, the widow of the distinguished sculptor, has presented to his native city, Urbana, Ohio, a replica in bronze of his first statue, the "Indian Hunter," which is to be unveiled with due ceremony June 29, the eighty-fourth anniversary of his birth, in Oakdale Cemetery. The original figure of the "Hunter" is in Central Park, New York, one of the first statues erected there, and there is a replica at Cooperstown, N. Y. Like the latter, the Urbana statue will be mounted upon a huge boulder. The first cast in plaster is in the Corcoran Gallery in Washington, D. C., and will be used by the bronze founders, Jno. Williams, Inc., to whom the commission was given for casting the statue.

—From "Monumental News," May, 1914.

**"You take the
Hot Bath, I'll take the
Cold One"**

Very polite but sometimes inconvenient, yet when there is only water enough in the tank for one hot bath, what can the rest of the family do? The answer is simple, install a

RUUD Automatic Gas Water Heater

Nobody waits—nobody worries—the service is unlimited—The RUUD never lags—never disappoints—You simply turn the faucet—the heater does the rest.

Complete descriptive literature on request

Before or After

Every time a good building goes up some one's reputation goes up with it.

If it's a modern building in the city, some type of a gas water heater is used.

When the architect fails to specify RUUD, scenes like the accompanying frequently occur.

An architect's name is linked with the incident and somebody's reputation begins to come down.

When are you going to find out, Mr. Architect, whether the heaters you specify are standing the test and adding to your prestige?

A RUUD will give such universal satisfaction to your clients, that you should acquaint yourself with the complete RUUD Line.

Fireproof-Airproof Doors and Interior Finish with Natural Wood Veneers

The PYRONO PROCESS, as applied to Doors and Trim, serves not only to save connected apartments from successive damage by fire, but to prevent expansion and contraction; thus assuring unchanging size and shape.

Artistic in the highest degree, combining safety and beauty, PYRONO satisfies the Architect in his most ambitious designing.

Practical from every point of view; moderate in cost; highly efficient; easily installed by carpenter workmen; finished at factory or building; imperishable, not subject to rot or rust; honest, not involving imitation; PYRONO fully responds to the desires of the Owner and the needs of the Builder.

We desire to co-operate with Architects, and will be pleased to supply full details and description on application.

What One Architect Did

Because a California architect was not content with kitchen equipment everywhere used, he set out to find a combination that would do away with most kitchen walking. He wanted to

Save Space and Save Miles of Steps

He put his problem before the Hoosier Manufacturing Company, makers of the Hoosier Kitchen Cabinet. The result was a perfect cupboard which combines in one spot all the conveniences of the Hoosier Cabinet, a big table and a spacious cupboard.

The PANTRYETTE

This new device, called the Pantryette, has space carefully laid out for several hundred articles—all that can be used with profit in a modern scientific kitchen.

It is a wonder of convenience—grouping everything at fingers' ends, so that all unnecessary walking and reaching is saved.

In building a new house, this new Hoosier equipment enables you to save 20 per cent or more in the size of your kitchen.

The wonderful success of the Hoosier Kitchen Cabinet stands back of the success of the Pantryette and should indicate to you the practicability of the Pantryette. Over 700,000 Hoosier Kitchen

Cabinets are in use today—more than all the other makes of kitchen cabinets combined.

Nothing pleases a woman more than a Hoosier-equipped kitchen. The Pantryette contains all the conveniences of the Hoosier Cabinet and many more. Suggest it in your plans.

The Pantryette comes ready to set into any kitchen; natural finish, so it can be finished to match kitchen woodwork.

Built in units, so it will fit the kitchens of cottages or mansions.

The *Pantryette* book is labeled "Kitchen Efficiency." It is all that its name implies. If you are building or remodeling, you should send for this book before your plans are made.

Barrett Specification Roofs

Mississippi River Power Company, Keokuk, Iowa.
 Engineers—The Stone & Webster Corporation, Boston.
 Roofers—St. Louis Roofing Co., St. Louis, Mo.

On the great Keokuk Power-house

THE mighty Mississippi has been dammed at Keokuk, Iowa. Under the enormous power-house pictured above, the Father of Waters is now perforce spinning vast turbines with the power of 150,000 horses.

The entire enterprise is a triumph of modern engineering skill. Quality has been the first consideration in everything. And the same engineering skill that harnessed the waters and constructed the foundation selected a Barrett Specification Roof as the building's crown.

How did it happen that a comparatively inexpensive roof was chosen for so monumental a building? Because The Barrett Specification

Roof is the best at *any* price. It would have been used if it had cost *twice* as much.

Such a roof will probably last twenty years or more without a cent of expense for maintenance. Its unit cost, which is the thing that modern engineering science considers, is about a quarter of a cent per foot per year of service, a lower figure than that for any other type of roof.

The Barrett Specification prescribes with precision the materials to use and the method of application, thus furnishing a basis for competitive bidding that is fair to the conscientious contractor, and providing means for insuring correct workmanship and materials. Include it verbatim in your own building specifications and you are assured of the best roof at the lowest price. Booklets on request.

Special Note We advise incorporating in plans the full wording of The Barrett Specification, in order to avoid any misunderstanding. If any abbreviated form is desired, however, the following is suggested:

ROOFING—Shall be a Barrett Specification Roof laid as directed in printed Specification, revised August 15, 1911, using the materials specified and subject to the inspection requirement.

AND
DOCTORS
THROUGHOUT
THE COUNTRY

Cut Shows No. 16-1
SADDLE SEAT
Fits All Standard Templet Bowls

THE WHALE-BONE-ITE SEAT is made of a compact core, covered with a sealed composition of hard rubber which is put on in its softened state under a fifty ton hydraulic pressure, thus anchoring the covering, as it were, to the core, making **ONE SOLID CONCRETE PIECE**, then vulcanized, which produces the hard surface capable of taking a high grade **POLISH**.

THE WHALE-BONE-ITE SEAT is indestructible.

NO JOINTS to open. Will not split, crack or warp. Light in weight. **COMFORTABLE** and of pleasing appearance.

IMPERVIOUS TO MOISTURE or the action of uric acids.

ABSOLUTELY SANITARY and **GERM PROOF**.

GUARANTEED

Hot water "Quick-as-a-Wink" the "Pittsburg Way" enables the laundress to complete her task quickly without undue effort.

HOT WATER

Quick as a Wink

the "Pittsburg Way" contributes materially to *comfort* and *efficiency* in the laundry.

This phase of residential equipment deserves consideration in proportion to its domestic value. The

"Pittsburg"

Automatic Gas Water Heater

insures a sufficiency of steaming hot water at *all* times; not alone for the laundry, but for the kitchen, bath, and boudoir as well.

Architects solicitous of their clients' domestic welfare specify "Quick-as-a-Wink" Hot Water the "Pittsburg Way."

Interesting literature will be mailed on request.

A Free Course in Architectural Design

Conducted by The Society of Beaux Arts Architects

Twenty-First Season—Aug. to July, inclusive.

The Course is open to draughtsmen and students of archi-
 tectural schools in any city of the United States or Canada,
 modeled on the principles of instruction at the Ecole des
 Beaux Arts in Paris. It consists of thirty-five (35) com-
 petitions divided into two classes supplemented by prize
 competitions, to enter any of which an annual Registration
 Fee of \$2.00 is required. Address applications for circulars
 of information and calendars for season 1913-14.

Wendell P. Blagden, Chairman, Committee on Education
 437 5th Avenue
 New York City

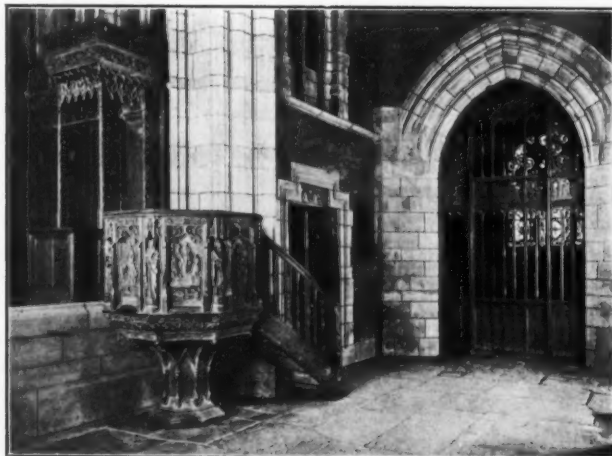

The UNIVERSITY OF PENNSYLVANIA

offers courses in **ARCHITECTURE** as follows:

1. A four year course, leading to the degree of B. S. in Arch. An option in architectural engineering may be elected.
 2. Graduate courses of one year permitting specialization in design, construction, or history; leading to the degree of M. S. in Arch.
 3. A special two year course for qualified draftsmen with options in design or construction. Leading to a professional certificate.
 4. Summer School instruction in architectural subjects.
- For circular giving complete information regarding the courses, requirements of admission, advanced standing, summer school, fellowships and scholarships, etc., address DEAN OF THE TOWNE SCIENTIFIC SCHOOL, University of Pennsylvania, Philadelphia, Pa.

The Home of the Los Angeles Athletic Club, a representative Club House of the Pacific Coast, is furnished throughout with

Whittall Rugs and Carpets

These floor coverings were selected because from the great variety of designs it was possible to carry out in perfect harmony the color scheme and decorative plan of the architect.

The constant and most trying wear to which any floor covering can be subjected is in a public building of this description, but the name

woven into the back of every rug and yard of carpet, is a well known guarantee of those qualities that give long and satisfactory service.

Our booklet "*Oriental Art in Whittall Rugs*" will tell you all about Whittall fabrics and their artistic possibilities.

RED GUM

(AMERICA'S FINEST CABINET WOOD)

Designed and executed by E. Jackson Casse, Chicago

If this bank interior were executed in carefully selected Circassian Walnut the effect would be no finer as to color or grain. This is a good example of what may be accomplished with Red Gum at a small fraction of the cost of Circassian Walnut.

Finished samples of selected RED GUM may be obtained on request from

The Gum Lumber Manufacturers' Association

The Seat
With
Bolted
Joints

The "NEVER SPLIT" CLOSET SEAT

We unhesitatingly guarantee this seat for **five full years**, because we know that the bolted joints are more than equal to the occasion and our finish has long since established its permanency.

"THE SECRET"

OF

The "NEVER SPLIT" CLOSET SEAT

is shown in the cut above—a strong steel bolt, nut and washer, embedded in the wood, from underneath, at every joint. By this means the pieces of straight-grained, quarter-sawed oak are bound so securely together that even greater strength is secured than if the seat were one piece with the grain running all the way around.

Write for our catalog.

NEVER SPLIT SEAT CO.
EVANSVILLE, IND., U.S.A.

BIRCH

U. S. Department of Agriculture
Bulletin No. 12 says:

Flooring and Finish

"Birch is a satisfactory wood for flooring, whether the purpose is ornament or long service, or both. The wood is handsome, it stands well when thoroughly seasoned, and it lasts a long time. Large quantities of this flooring are made in the Lake States and it finds service in houses of the better class in practically all of the Eastern and some of the Western states.

"Ornamental columns of birch find place in doors. Newel posts of the same wood and the associated rails, spindles, and steps of stairways belong in the same class along with brackets, capitals, chairboards, moldings, grills and mantels. Window frames, door frames, and blinds of birch are exquisite finish when a dark, rich effect is desired. Birch doors are a special article—that is, particular pains are taken to finish them in the most attractive style, after selecting choice material. Curly birch is often seen to best advantage in this class of work. The wavy grains and figures are matched in the panels, stiles, rails, and mullions. The curly wood is frequently cut into veneer for the double purpose of making it go farther and securing better seasoning. It is not uncommon to equip birch doors with knobs of the same wood. Many birch knobs, however, are used elsewhere than on doors; furniture makers find many places for them. Ceiling is little less important than flooring in the quality of birch used. A considerable amount of the birch ceiling listed is intended for porches. The wood shows to good advantage in wainscoting, where the dark wood of the heart is sometimes alternated with a white wood such as maple. Floors and ceilings are often made in the same way.

A HOME finished throughout in *Birch* is in the best of taste and yet within the means of every builder. We can show you how to do it.

WRITE today for our illustrated

Birch Book "A"

and set of

Stained Birch Panels

They will show you just how *Birch* looks and tell you how to use *Birch*.

A card will bring them postpaid.

WAUSAU, WISCONSIN

Dept. A

CYPRESS "The Wood Eternal"

is accounted conspicuously fine for the inside trim of the house, especially for the kitchen. It is not "put on the warp" by steam and other forms of moisture, such as too often infest the kitchen. Then the grain is handsome and it takes a most beautiful finish. Why should not kitchens be attractive? Would it not help solve the servant problem? Cypress lasts and lasts and lasts and lasts—and always "behaves."

Let our "ARCHITECTS' DEPARTMENT" help YOU. Our entire resources are at your service with Reliable Counsel. We invite Correspondence with a serious purpose in it.

The Oil Enamel For Walls and Ceilings

The new all-'round flat-drying finish, velvet-soft in tone, that makes walls, ceilings and woodwork impervious to water, dust and germs; that is suitable alike for the mansion, the modest home or the giant skyscraper.

The finish that carries out your decorative ideas as you planned them, and then preserves these effects. Because it can be washed like marble, without detriment to freshness and tone.

O'BRIEN'S
Liquid Velvet
REGISTERED TRADE MARK

is an oil enamel made by The O'Brien Varnish Company. It spreads freely, leaves no laps or brush marks, does not shine or glare, presents a beautiful, soft velvet surface to the eye. Unlike water coatings, it does not crack, peel, blister or rub off. Extremely economical for all interior work.

Send for Free Book

Write a postal for the LIQUID VELVET Book. It tells how LIQUID VELVET gives you the effects and results you plan, how it perpetuates your work. Drop a line today. Please mention your dealer's name.

Minneapolis

Denver
Pittsburg
New Orleans

THE story is told of an Architect who vowed he would never use a Varnish Finish on the wood floors of his home, because he couldn't get the members of his family to wear rubber heels on their shoes.

There once *was* a time when such precaution might have been necessary, but *that* time was *before* the days of

DEVOE MARBLE FLOOR FINISH

If THAT Architect could but *now* see the beautiful "polished-marble" surface that DEVOE MARBLE Floor Finish produces on wood floors—a surface so *durable* that it *cannot be marred* by any ordinary use, he would surely and immediately become a voluntary convert.

If YOU want a finish for wood floors that is Elastic, yet as Hard and Durable as the Proverbial Flint, and which possesses the all-important quality of Resisting the Wear of Every-day Use as well as the Action of Soap and Water, you should spell it in your specifications, D-E-V-O-E M-A-R-B-L-E Floor Finish.

We will mail a miniature wood floor (2 3/8 x 5 1/2 in.) finished with DEVOE MARBLE FLOOR FINISH, and also our Book of Complete Specifications, showing how to get the most DURABLE results with Paint and Varnish, if you will address us at 105 Devoe Building, New York, and mention The Architectural Record.

SPECIAL DESIGNS FLUSH VENEERED DOORS

COATS OF ARMS, CRESTS,
MONOGRAMS OR EMBLEMS

Inlaid Designs in Roddis Flush Veneered Doors

We use inlaying, both in plain Grecian lines and marquetry work. Coats of Arms, Crests and Emblems of all kinds. All of the work is in wood. The colors are worked out by blending the natural color of the woods. The woods most largely used are ebony, white holly, satinwood, tulip, vermillion and boxwood. Our standard Grecian inlays are $\frac{1}{8}$ inch wide, made up of outer line of holly and center of ebonized wood.

Send for our catalog showing these doors in the natural colors of the wood.

ARCHITECTS, SEE SWEET'S

SATISFACTION IS ASSURED WHEN YOU SPECIFY OAK FLOORING

Builders and owners know the advantages of OAK FLOORING. When OAK FLOORING is used it means "easy to rent" and "easy to sell" property. Its durable and artistic qualities make it "America's best and finest flooring."

For remodeling old homes or over cheap subfloor in new homes, $\frac{3}{4}$ " thickness by $1\frac{1}{4}$ " or 2" face can be laid at a very low cost. It is cheaper than carpets or pine flooring. When laid it has all the appearance of heavy flooring.

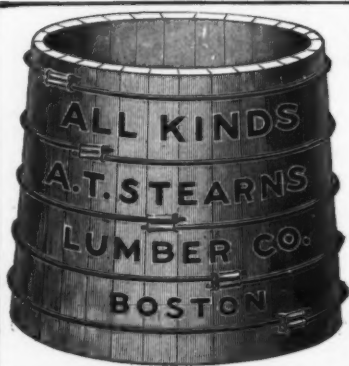

For durability OAK is the best. OAK FLOORING laid thirty years ago, in many public buildings, after very hard use, is still in good condition today.

See our pages 986 and 987 "Sweet's Catalogue" (1914) of Building Construction; Section 21-B in Associated Builders' Catalogue. For further information and booklet address

Red Lead in Oil is Easy to Use

SERVICE tests have demonstrated, time and again, the supremacy of red lead as a protective paint for iron and steel. Its ability to *stick* to the surface and to *keep moisture out* has made red lead the choice for our biggest buildings, bridges, etc. In its new form—that of a pure linseed oil paste—it is more than ever attractive to the engineer and architect. In this improved form, red lead is a wonderfully workable paint as well as a remarkable protective paint.

Dutch Boy Red Lead in Oil

promises to make red lead a universally-used metal paint. Shop coats and field coats may be applied without difficulty, if Dutch Boy red lead in oil is used. Dutch Boy paste red lead brushes out as easily as white lead in oil. Specially-skilled brush hands are not needed to put it on.

Besides, Dutch Boy red lead in oil stays soft and workable indefinitely. What is left over at the end of the day may be used when work is resumed.

These advantages are important enough to demand the serious consideration of every engineer and architect. Let us send a sample of Dutch Boy red lead in oil and booklet giving complete details and working formulas. If you will, we should be glad to have you use the coupon.

Manufacturers also of
Dutch Boy White Lead
and Dutch Boy Linseed
Oil.

Vitralite

THE LONG-LIFE WHITE ENAMEL

THOSE who heed the eternal law of "fitness," or decorative harmony, know that Vitralite, the Long-Life White Enamel, has earned its birthright on the woodwork and walls in homes of culture, refinement and beauty.

And further, from the standpoint of practical utility and efficiency they know that it is particularly adapted for hospitals, hotels, apartments, theatres, and industrial plants; wherever utmost hygiene, durability, light reflective qualities, beauty and economy are necessary. It is universally appropriate.

Specify Vitralite, exterior or interior, for wood, metal, plaster or concrete.

Equally efficient for its purpose is "61" Floor Varnish — mar-proof—heel-proof—water-proof. The little difficulties that sometimes occur between architect and client are eliminated as far as the floor is concerned when "61" is used.

Booklets and Sample Panels on Request.

See Pratt & Lambert specifications, 1914 Sweet's Catalog; also, Specification Data (Canada.) An extensive variety of wood finishing effects may be seen in New York at the Pratt & Lambert Architectural Show Room, 7th Floor, Cameron Building, 185 Madison Ave., Cor. 34th St., also at the Chicago and Buffalo offices.

**For Large and Small Buildings
For Factory and House
For Strength and Beauty**

Douglas Fir insures so much practical superior value for so many different uses that it is generally recognized as the

Greatest "All-Utility" Lumber

For structural purposes, such as the columns, girders and beams of a factory, or the framing timbers of a house, it is ideal, not only because it is stronger than any other commercial structural lumber, but also because it weighs much less than any other wood of anywhere near its strength.

When cut "Vertical Grain" for flooring, stepping, shelving, and similar uses, where friction and mechanical wear must be withstood, or with grain perpendicular as in paving blocks, it is astonishingly durable.

When cut "Slash Grain" for interior finish, doors and panels, it shows such a handsome and distinctive figure that it is widely used for interior finish in the most elaborate and expensive buildings and is frequently given preference over costly hardwoods, not merely because it is cheaper, but because it is regarded as more beautiful and as having more individuality.

The U. S. Forest Service Bulletin No. 88 in commenting on Douglas Fir as "the most important of American woods," says, "though in point of production it ranks second...the great variety of uses to which this wood can be put place it first."

Ask Your Local Lumber Dealer

to show you DOUGLAS FIR. And you will be interested in the Douglas Fir Booklet, which we will send you on request. It is an Economy Help. Write us for it.

CHICAGO

NEW YORK

PHILADELPHIA

Hundreds and hundreds of the finest buildings in America are built of Indiana Limestone, "The Aristocrat of Building Materials." So now, of course, there have arisen many artificial substitutes for this and other stone.

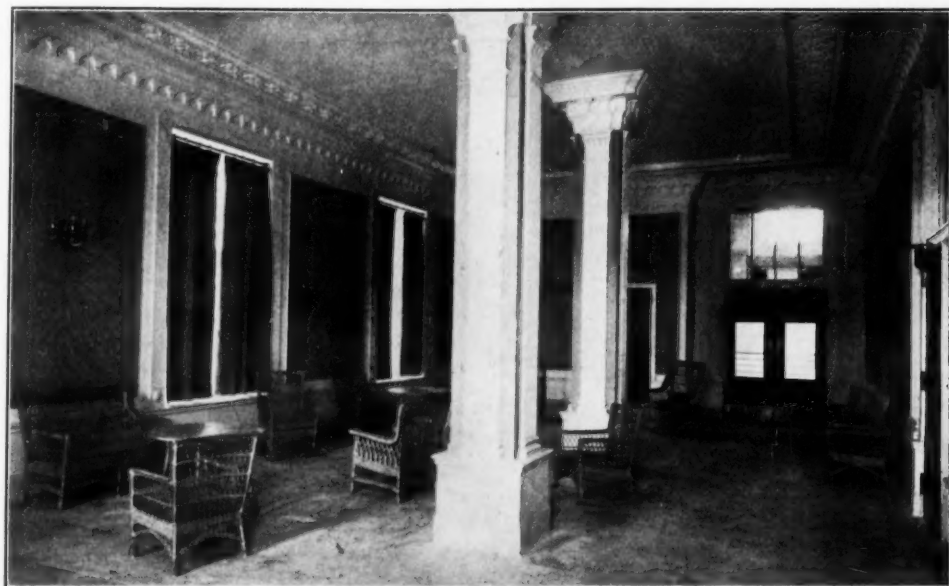

These substitutes are the best of reasons why *you* should build of the genuine Indiana Limestone. *Natural materials cannot be imitated.* Copying is never a pleasing process; and imitations are "cheap" — or they would never be adopted.

Hence, a cottage, a mansion, a church or a skyscraper—any building you think much of or expect someone else to think enough of to really love it, or buy it, or *rent* it, should be built of the true, beautiful and genuine, INDIANA LIMESTONE, "The Aristocrat of Building Materials." *The cost is NOT too much.*

"BUFF," "BLUE" or "MIXED."

Sample of the stone, a beautiful, authoritative (and interesting) 36 page book, richly illustrated, will come on request. The help and suggestions of our Service Bureau also are FREE. Will you write?

Target-and-Arrow Roofing Tin

"NEMOURS," THE RESIDENCE OF ALFRED I. DU PONT, WILMINGTON, DEL.
Carrere & Hastings, Architects, New York City. James M. Smyth, Builder, Wilmington.

Decks, gutters, flashings, etc., of IX Target-and-Arrow tin. Also sheet-metal work on lodges at the main entrance driveway, garage, and stable.

THIS building is shown as an illustration of the fact, well known among architects and sheet-metal roofers, that nothing but strictly high grade, durable metal should be used for purposes of this kind, where some other form of roofing is used, such as slate, tile, shingles, etc.

If inferior metal is used for the gutters, valleys, flashings, etc., of such roofs, the expense and trouble of **tearing up the roofing** to replace defective metal is out of all proportion to the saving in the first cost of the cheaper material.

For this reason the old-time hand-made roofing tin identified by our Target-and-Arrow brand, has always been a favorite for sheet metal work of this kind.

The cost of this old-time specialty is only a trifle more than other high-grade roofing plates, and where the quantity of metal used is so small, the slight additional cost of the entire sheet-metal contract, representing as it very often does the difference between trouble and satisfaction with the roof, is too small to be an objection.

We repeat that we have been supplying this durable roofing tin to American sheet-metal workers for more than sixty years. For many years it was known as "Taylor's Old Style" brand, but the words "old style," being non-registrable, were abandoned in 1905 in favor of the older designation of the "Target-and-Arrow" trade-mark that has always been stamped on the sheets.

The value of this high grade roofing material, fit for buildings of the highest type, has been fully proved by the test of time, the only sure test.

Architects can get from us on request a useful little reminder of our Target-and-Arrow roofing tin in the form of a six-inch celluloid-edge boxwood scale, also a standard tin roofing specification form, and some instructive literature telling about this old product.

Our catalog is in "Sweet's," pages 520-522 of the 1914 edition, and pages 546-549 of the 1913 issue.

Let us help you solve Lighting Problems

It is the business of the Illuminating Engineering Department at Harrison to solve lighting problems. Years of experience, embracing every kind of lighting, make the recommendations of these lighting experts especially valuable to the busy architect, to whom lighting is only one of many problems.

We want every architect to feel at liberty to consult our lighting engineers, because we feel that the results of this friendly cooperation will be mutually beneficial to the architect, to his client and to ourselves.

Atlantic Glazes

TO make our wide range of glaze colors we buy a great many chemicals, some in carload lots and some by the ounce, but always the best.

The "commercial" grade is a doubtful quantity and is apt to contain materials that cause the glaze to crack or peel after months of exposure.

We know what we are doing when we use pure chemicals; we get the superficial effect you want and the fundamental dependability you have every right to expect.

Atlantic Terra Cotta Company
1170 Broadway, New York

EVERY once in a while we are confronted with the statement "your catalog is very interesting and has made us want a greenhouse more than ever, but we have looked carefully over our grounds and there doesn't seem to be a single practical place for its placing."

To which our answer is:

We can build a greenhouse almost anywhere. But one thing certain, simply because your available location may be a rapidly sloping one, it should be no reason for your being discouraged. Look at this house and see how pleasingly the problem was handled. Careful planning, attractive designing, and a little consistent planting of shrubs and vines, and the result will delight you. Having done so many such things for others, there is every reason to believe we can satisfactorily solve your problem, in the most effective, economical way.

Send for our new catalog. Or send for us. Or both.

Ordinary pipe (not marked)

"NATIONAL" Pipe (marked NATIONAL)

- 1 **Spellerizing.** This process consists in subjecting the heated bloom to the action of rolls having regularly shaped projections on their working surfaces, then subjecting the bloom while hot to the action of smooth faced rolls, and repeating the operation, whereby the surface of the metal is worked to produce a uniformly dense texture, better adapted to resist corrosion, especially in the form of pitting. This process is controlled by National Tube Company, who exercise the sole rights to its use. All "NATIONAL" Pipe four or five inches and under in diameter is Spellerized.
- 2 **From ore to finished product in one organization.** This secures absolute control over all processes of manufacture; unified superintendence; unvarying high standard of quality; consistent and regular system of inspections and tests with all that this implies in the finished product.
- 3 **Uniformity in chemical composition and physical properties.** "NATIONAL" Pipe is made in large unit quantities, for the most part by machinery, therefore a more certain uniformity is obtained than is possible by the old process of puddling by hand. Tests show that the carbon content does not vary more than .01 per cent from year to year. The physical tests (in charge of a corps of trained inspectors and testers) show a dependable uniformity in output.
- 4 **Full Standard Weight Only.** "NATIONAL" Pipe is not made in the lighter or so-called "Merchant" grade. When a buyer sees the name "NATIONAL" rolled in raised letters on a piece of pipe he is assured of a heavy and durable product.
- 5 **Clean-cut, strong, sharp threads.** "NATIONAL" Pipe is uniform, therefore good threads are cut without difficulty.
- 6 **Marking "NATIONAL" Pipe with the name "NATIONAL."** This prevents substitution of an inferior product, if the buyer insists on pipe marked "NATIONAL." The name "NATIONAL" on pipe is the purchaser's insurance policy of quality, and it is on every length of genuine "NATIONAL" Pipe.

Write for "NATIONAL" Bulletin No. 12. A Bulletin brim full of valuable information on the subject of pipe, particularly "NATIONAL" pipe. When you have read it you will file it for future use. IT IS FREE.

To readily identify "National" material, and as protection to manufacturer and consumer alike, the practice of National Tube Company is to roll in raised letters of good size on each few feet of every length of welded pipe the name "National" (except on the smaller butt-weld sizes, on which this is not mechanically feasible; on the smaller butt-weld sizes the name "National" appears on the metal tag attached to each bundle of pipe).

MARKING

Name Rolled in Raised Letters on National Tube Company Pipe

When writing specifications or ordering tubular goods, always specify "National" Pipe and identify as indicated.

In addition, all sizes of "National" welded pipe below four or five inches are subjected to a roll-knobbling process known as Spellerizing, to lessen the tendency to corrosion, especially in the form of pitting. This Spellerizing process is peculiar to "National" pipe, to which process National Tube Company has exclusive rights.

Detroit Packless Valves pay dividends

Ordinary radiator valves with stuffing boxes are a constant source of damage, annoyance and expense.

Sooner or later valves of this type are sure to leak around the stem. It is unusual to find a building, where valves of the packed variety are installed, where leakage has not done some damage.

Spoiled floors, stained and discolored walls and ceilings, loose plaster, spotted decorations, furniture and rugs—these are some of the most common evidences of the use of cheap valves.

Detroit Packless Radiator Valves are absolute insurance against such troubles on all kinds of steam heating systems.

They are tight—and they always stay tight. They will not leak under any circumstances.

The installation of Detroit Packless Radiator Valves represents an investment that

pays big dividends—dividends in satisfaction, in freedom from annoyance and in money saved.

Their first cost is the whole cost. They do not have to be repacked at frequent intervals at considerable expense for labor, and in large buildings there is no necessity of a man devoting a large part of his time to their care.

Detroit Packless Valves prevent the damage which comes from leaking valves and eliminate the necessity of redecorating and making repairs. They are a sure preventive of annoyance to tenant, owner and management.

And they give permanent satisfaction because they are good valves and handsome ones.

Complete information on the subject of radiator valves will be sent upon request. Ask for booklet V-40.

The Dreaded Pipe Destroyers—Corrosion and Electrolysis
The Greatest Factor in Pipe Cost—Constant Repairs
The Frequent Cause of Pipe Failure—Flaws

These—and many other pipe problems—overcome by

BYERS GENUINE **WROUGHT IRON PIPE**
FULL WEIGHT GUARANTEED

BYERS Pipe offers greatest resistance to the attacks of corrosive agents, and to the disintegrating action of electrolysis. It possesses the highest known factor of safety in these important phases of pipe service.

Byers Pipe gives uniform, dependable, continuous service. It is remarkable for its freedom from sudden failures, and for its ability to meet the most excessive demands of emergency. This reliability is due to its absolute genuineness, full weight, and the absence of flaws. Byers Pipe is made from the best grade of pig iron, by careful, hand-controlled processes. It is tough, fibrous, ductile—capable of withstanding great torsional, tensile and pressure stresses, incessant vibration, and the fracture forces exerted by sudden changes of temperature.

Byers Pipe represents the highest degree of pipe economy. Its lasting, low-cost service is in marked contrast with the expensive repairs and replacements that must constantly be made on inferior pipe installations.

These qualities of Byers Pipe have been completely demonstrated by

actual service. They have been proved real—not merely theoretical—by the continuously recorded experience of fifty years.

The year 1914 marks the Fiftieth Anniversary of Byers. Since 1864 the Byers reputation for careful, hand-controlled methods, highest quality of material, and manufacturing independence has been consistently maintained.

Send for the Byers Book—"The Control of Quality in Every Process." It contains valuable information for every pipe user.

NEW YORK JUNE 1914

AN architect is not judged by the company he keeps or the cigars he gives away, but by the buildings he designs and the material and methods he specifies.

It seems odd, but people who don't know right from wrong are usually in the wrong. We have spent many years and some money telling architects about the right method and the "White" method of fireproof construction. Have you our book of specifications?

* * *

Success is merely a matter of profiting by the fewest mistakes.

* * *

A good architect cannot afford to sidestep quality. He can substitute, but in the long run even light substitution spells heavy criticism.

* * *

The feeling that the world is at your feet rather drives home the thought that your foot mustn't slip. It doesn't take much to turn a perfectly good building idea into a joke. Simply omit the right type of fireproofing and you've done enough.

A deliberate lie is pretty hard to swallow, but the truth is not always the most palatable thing. For instance, the art of substitution and the acknowledgment of the mistake when things go wrong. Specify features which have been proven one hundred per cent. perfect.

* * *

It takes a heap more courage for a man to admit that he is wrong than to insist that he is right. Be careful of your concrete fireproofing. Specify "White" and you'll never

have to admit you were wrong. Also — it will keep you "right" with the owner.

* * *

Because one architect may be lucky enough to have a poor grade of fireproofing prove successful, don't you trust to luck, too. Play safe; let the other fellow trust to luck and see where he lands, ultimately.

* * *

The only way to get along with some people is their way. But, when your man says of Fireproofing —

"Who knows whether it is good or bad just so it passes muster with the authorities?" remember your reputation. The supreme test may come at any moment, and your fireproofing must not be found wanting. Stick out for what you know to be right and "White."

* * *

The worst work is often done with the best intentions, but your claim of good intentions will not save your honor when your building fails to resist fire.

* * *

What good is the guarantee of the most reputable individual in the world if the fireproofing of a building proves defective? A guarantee will not shelter the renter, his merchandise or his employees. The method of fireproofing you specify must be absolutely dependable.

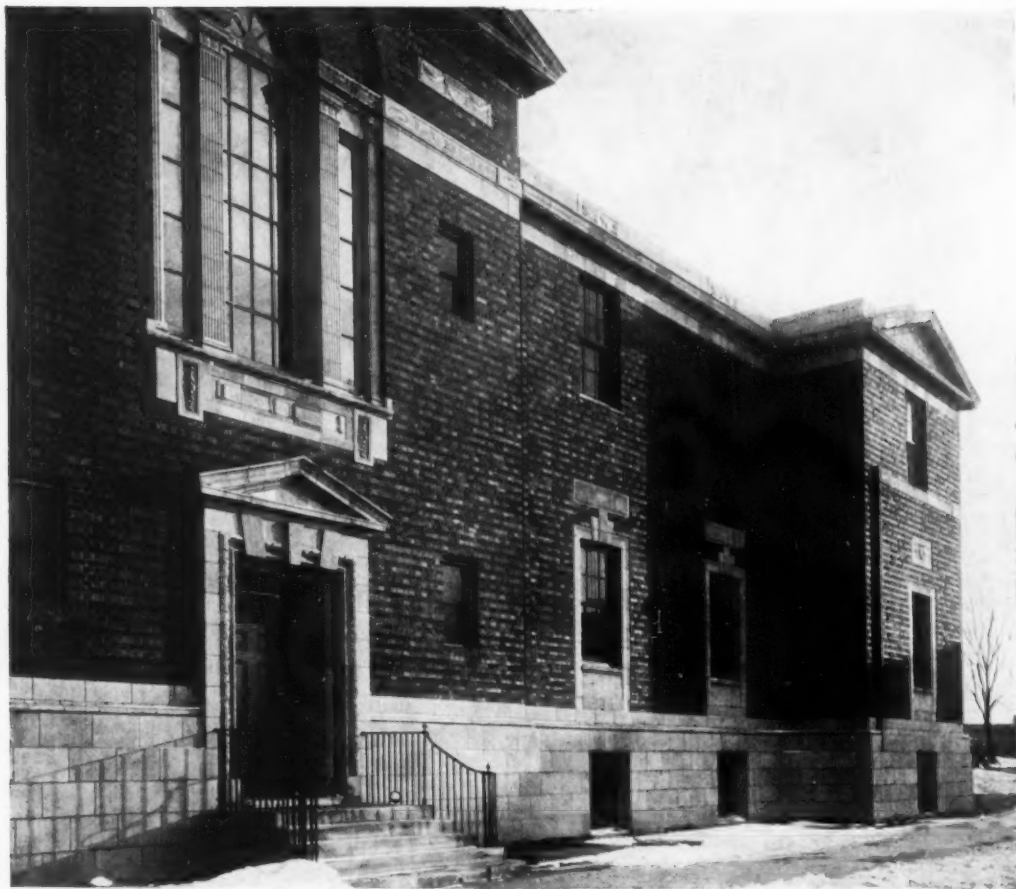

Use the "Hook"!

What Hook?

Why the "White Integral Furring Bar Support" Hook. Best for every kind of furring—plain or ornamental. Economical.

Floor space is valuable in the power rooms of office buildings, apartment houses, and buildings of similar character.

You can save floor space by installing

Westinghouse Switchboards

Westinghouse 7-inch meters allow boards to be built that occupy the smallest amount of space.

On the board illustrated 7-inch meters greatly reduced the floor space required, 16-inch panels taking the place of 24-inch panels necessary with 9-inch meters. The length of the board is 6 feet 8 inches. Had 9-inch meters been used its length would have been 9 feet 9 inches.

Consult us on your next switchboard.

PATTERSON BATTERY SETS

Patterson-Columbia
Screw Top
Cell

MODEL BMC-24—SURFACE TYPE. Capacity, 6 volts, 50 amps.
(Will do four times work of old-time battery set)

Patterson-Columbia
Screw Top
Cell

A high-class Electrical Contractor commenting on the advantages of PATTERSON BATTERY SETS, said to us the other day:—"You're right,—the old-style battery installation is, and always has been, a bad proposition and productive of a lot of trouble and expense for the owner of a building, but how can I figure on PATTERSON BATTERY SETS if my Architect doesn't specify them, so my competitors will also have to figure on PATTERSON BATTERY SETS!"

We had to admit that to a certain extent the contractor was right, but we did, before he left our salesroom, get his assurance that he'd use in all his work, even where not specified, the lowest-priced Steel-Box PATTERSON BATTERY SET "BB"—and the better sets where conditions or specifications would permit the extra expense of Multiple-Service Cabinets "BMC."

Why not ensure your clients the satisfaction of a PATTERSON BATTERY SET in every set of specifications you draw? In many cases it won't cost a penny more,—at the most, it can't cost but a few dollars—yet it will add much to your clients' comfort and satisfaction, for Electric Signalling Apparatus,—Bells,—Annunciators,—Telephones,—Door-Openers,—Elevator Calls,—etc., etc., are mighty troublesome when out of order!

Just have your clerk put in your Electrical Specification folder the following:

"The Battery shall be a Centralized MULTIPLE-SERVICE PATTERSON BATTERY CABINET (here insert Flush or Surface—Steel or Oak as required) of PROPER VOLTAGE to satisfactorily operate all signal apparatus in the building and of SUFFICIENT AMPERE-CAPACITY to give two (2) years' uninterrupted service; the Cabinet shall be furnished with one complete equipment of PATTERSON-COLUMBIA Cells."

We'll do the rest! Catalogue, photos, and full information upon request. Ask for Catalogue 168.

"SWEET'S" 1914—SEE PAGES 1680 to 1685—"SWEET'S" 1914

Mrs. C. A. Adams finds BEAVER BOARD the best wall and ceiling material for her beautiful home at Belmont, Mass.

An Eight-Year Quality Growth

BEAVER BOARD is recognized today as a standard building material, almost as staple as brick or concrete.

It has attained this rank in a phenomenal eight-year growth, based on its success in actual use. In 1906 BEAVER BOARD was just beginning to supply the demand for a new wall and ceiling material. Today its use is international.

The durability of BEAVER BOARD, its beautiful pebbled surface, the fact that it is better in 41 different ways than lath, plaster and wall paper,—these qualities have built an international reputation for BEAVER BOARD.

BEAVER BOARD is more rigid, more durable, more beautiful in its pebbled surface now than it was during the eight-year period which made its reputation.

Expert Counsel for Every Job

Good designing and good workmanship are the only essentials to success with BEAVER BOARD. We help you to obtain both through our service departments for architects, owners, builders and contractors. It is the object of these departments to see that the architects' specifications are followed and good workmanship made certain.

We shall be glad to furnish samples of BEAVER BOARD, descriptive literature, and full information regarding sizes, prices, methods of construction, or other data desired.

To assure the use of GENUINE PATENTED BEAVER BOARD, specifications should be as follows:

Walls and ceilings to be constructed of BEAVER BOARD manufactured by The Beaver Board Companies, and identified by their trademark on the back of each panel.

BEAVER BOARD is sold by 8000 builders' supply, lumber and hardware dealers in sizes to meet your needs.

The Beaver Board Companies

BEAVER BOARD

Walls & Ceilings

DOLLARS and SENSE

should both be considered simultaneously, rather than

DOLLARS or CENTS

in building. The use of GREENDALES enhances the intrinsic value and returns immeasurably, while affording permanent satisfaction, at only a slight advance in cost over ordinary face brick.

GREENDALES are actually worth a great deal more than other face brick, since the material and efficient workmanship cost more.

The Sense displayed in the use of GREENDALES is obvious to the most casual observer, from the artistic effects, rich but subdued tones, and ineffaceable beauty through impervious qualities.

Nature in Greendale clays provides the mineral ingredients, Science and Skill, the beautiful and durable effects never heretofore attained.

The best effort of study, skill and science is exercised in the upbuilding of Brick in architecture; and the achievement of a creative evolution, embodying all that could be desired by the most fastidious and exacting taste in any kind of architecture, is meeting with gratifying favor in

The very latest improvements in Air Conditioning Apparatus are embodied in the construction of

"Sirocco"
TRADE MARK

Purifiers, Coolers and Humidifiers

All spray heads can be flushed simultaneously—*without reducing the efficiency of the spray*, by simply manipulating a three way cock located on the *outside* of the machine.

For thoroughly purifying and cleansing the air, a set of scrubber plates are placed *between* the spray and the eliminators. The scrubber plates are so arranged that *both sides* are continuously flooded with spray water.

The eliminator plates in a Sirocco Purifier, Cooler and Humidifier are of sufficient number and placed at such an angle as to positively take out every *grain* of entrained moisture and still keep the resistance through the machine down to a very low figure. Scrubber and eliminator plates are removable, one,

two or six can be taken out or put in without destroying the others or *dismantling any other part of the machine*.

Tank and casing seams are *double riveted and sweat soldered*—absolutely unbreakable. Sirocco Machines are easy to install, as *everything fits before being shipped*.

Write for bulletin No. 2301, which describes and illustrates Sirocco Purifier, Cooler and Humidifier.

ARCHITECTURAL PORTFOLIO

Products that Protect both Life and Property

**The Products That Give You
a Non-Destructible-by-Fire
Building Also Furnish a Per-
petual No-Death-By-Fire As-
surance.**

The safety of the people and the safety of the building fortunately go together when we consider FIRE. The materials which make the building fireproof likewise protect the lives of those who dwell within it. When we build to save and protect our property we build to save our lives.

The crime of building anything else than the best is equivalent to confessing that for the sake of saving a few dollars, we are willing to gamble our lives away. It is a gamble of fate, this building of houses of wood, or of any other combustible material.

It is a crime to use wood in any capacity at all in a structure used for the habitation of man.

All buildings of a public or semi-public nature should be absolutely fireproof, safe and sanitary. For example, patients in hospitals should be able to sleep in peace without the disturbing thoughts of a midnight holocaust.

The Dahlstrom Products installed in an otherwise fireproof building insure absolute safety from fire and make the structure far more durable and sanitary than the use of wood or any other material.

Having originated and developed hollow metal doors and trim, we are in a position to furnish much valuable information and data relative to safe and sane building construction. We will be pleased to cooperate with those interested and place at their disposal our intimate knowledge of the subject.

Literature upon request.

CAFE—HOTEL RECTOR, NEW YORK CITY
Tiger Brand used for white coating

Tiger Brand White Rock Finish

Hydrated Lime for White Coat Plastering

This specification means a lime burned from the famous White Rock limestone, and scientifically hydrated at the kiln by adding just the right amount of water.

Careful screening removes all unhydrated cores or impurities which would otherwise absorb moisture and burst out in the finished surface.

Tiger Brandspreads as easily

and trowels down to as smooth a finish as lump lime putty.

You run no risk of spoiled material, because time does not affect it, neither can a laborer spoil the job by improper slaking.

Noted architects are specifying Tiger Brand on their best known works—still it is low enough in price for the most modest building.

Specification book on request.

HALE & KILBURN CO. PLANT

The "Globe" Ventilator

is especially adapted for removing foul air and excessive heat in churches, school houses, public buildings, residences and store houses; for exhausting steam and gas from mills, foundries and factories, and for ventilating sewer pipes.

By our system, the wind striking upper or lower dome from any direction, is deflected by the curved edges, which forms an exhaust for the ventilator, compelling the air in the pipe to rush towards the head to fill the partial vacuum thus formed.

Made in copper and galvanized iron, with dome or glass tops, from 2 to 84 inches in diameter.

Globe Ventilator Company
Troy, New York

Knowing how means success

If you have an important piece of work on which certain fixtures have to be fastened to walls of concrete, brick, stone, etc., what method would you employ? Surely not the old fashioned lead-in or wood plug fastening, but the SEBCO METHOD, which insures security, permanency, neatness and satisfaction.

How to do it—

Drill a hole, insert a SEBCO Shield, place fixture and tighten bolt—the job is done—the shield has expanded, embedding itself so firmly in the surrounding material that it can't loosen or pull out.

Send for our Catalog, also samples of Expansion Bolts and Anchors.

Casement Windows Not Expensive

The very small additional cost of Crittall Casement windows over the cost of ordinary windows has surprised many inquirers who were of the impression they could not afford casements.

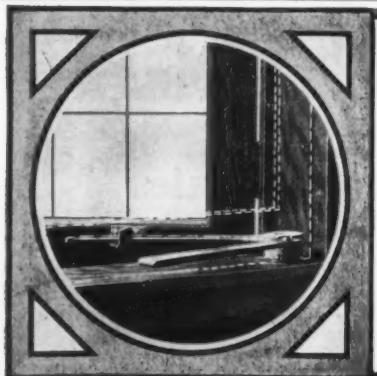

The many obvious advantages of Crittall Casements, their beauty, convenience and reliability are within the reach of the builder of the modest bungalow or small house.

Write us for further information, circulars, etc.

CRITTALL CASEMENT COMPANY

Dust Cannot Clog the Wheels of Justice Here

for the architect feeling the necessity of a
dustless, impervious, everlasting and emi-
nently satisfactory floor, specified

Viranium

"The Wear-proof Way"

Concrete Floor

The reason is plain. You know, Mr. Architect, that concrete is porous. When ordinary concrete floors are subjected to constant wear, the pore walls break down. Viranium, a metallic hardener, fills these voids, making a dense, congealed, massive, waterproof topping absolutely impervious to wear, at a cost no greater than is necessitated for the ordinary.

*Let us prove this to you. Fill

Cheney
Decorative and Upholstery
Fabrics

in Facsimile of
 Antique Weaves

The duplication of designs and colors found in rare antique fabrics has long been a specialty with Cheney Brothers.

Our representatives search Europe for examples of ancient weaves that are adaptable to modern needs and purchase them whenever possible.

But these beautiful damasks and tapestries and velvets represent but a small part of the extensive lines of

CHENEY
SILKS

made especially for upholstery and decorative purposes. Our artists are constantly producing new designs, adapting weaves, and creating fabrics that are suited to any desired treatment.

Cheney Silks offer a very complete assortment of fabrics to harmonize with various periods—each pattern true to school in design and color harmony.

Our customers may purchase, to aid them in securing orders, 1½-yard samples of these materials, with small swatches attached to show color range. We carry a large stock, from which orders booked from samples can be promptly filled.

Refrigeration with the trouble left out

Your clients can now have their own ice supply without the trouble and inconvenience of the old-style machines. It's as simple as A, B, C when they install

JM SYSTEM of Refrigeration

(With the Audiffren-Singrun Machine)

No complex parts. So simple in operation that any one can run it.

No pounding noise. Does not have to be recharged. No dangerous gases.

When a residence is equipped with this machine the muss and nuisance of icing refrigerators are done away with. And furthermore, such clients are independent of the dealer who charges exorbitant prices because of a shortage in the ice supply.

Can be used for refrigeration or ice-making. Makes 11 to 110 pounds of ice per hour, according to size of machine. Hundreds of these machines are in daily use, many of which have been in operation for six years without a cent for repairs.

Fireproof, Artistic, Moderate-priced

J-M ASBESTOS SHINGLES

These shingles satisfy the demand for a moderate-priced artistic roofing that gives absolute fire protection. They are suitable for the most elaborate, high-class building or for the humble cottage.

Because of their thickness and their rough, irregular edges, which relieve the usual monotony of straight lines, they make it possible to secure the most artistic effects.

J-M Asbestos Shingles are made of two fireproof materials—Asbestos and Portland Cement—combined to form an artificial stone that is practically indestructible.

Furnished $\frac{3}{8}$ -inch thick with smooth edges, in colors of gray, Indian red, mottled brown and slate; and $\frac{1}{4}$ -inch thick with rough edges, in gray, mottled brown and Indian red.

Residence of D. J. Dickson, Wayne, Pa.; Covered with J-M Asbestos Shingles. Francis Gogeri, Wayne, Pa., Architect.

Sun Parlor Greenhouses Conservatories

In fact we build every kind of a home for flowers and sunshine.

King Channel Bar Green- houses.

take their name from a type of iron frame construction original with us. By a clever use of iron channel bars we are able to do away with thick frames and supports and build a greenhouse that looks as if its walls and roof were all glass. Yet the house is stronger than the old-fashioned houses that looked as if there were more supports than glass.

Flowers, Palms, Vege- tables.

and all growing things need sunshine from early morning to late afternoon. The various types of King Iron frame construction eliminate shadow casting supports and make King Greenhouses both productive and artistic.

One of these forms of construction is just suited to that greenhouse you have always planned to have. Write today for Bulletin No. 47. After you have looked it over you can decide what type pleases you—then our service department will furnish plans and estimates without charge or obligation. Better write today.

SPECIFY **McCRAY REFRIGERATOR**

in your plans and win the lasting approval of your clients.

McCray Refrigerators are scientifically built. Their patented system of air circulation keeps a pure, cold, dry current of air constantly passing over ice and contents, all odors and impurities being automatically discharged through the water sealed drain pipe. They keep perishable foods fresh and wholesome. Linings are sanitary and easy to clean—porcelain, white enamel, opal glass or odorless white wood. A convenience that will be appreciated by your clients is our outside icing arrangement, which keeps the iceman outside the home. Many of the largest institutions and residences in the country use the McCray. Stock sizes or built-to-order, just as your requirements demand.

Take Advantage of Our Free Plan Service

We cooperate with architects everywhere and will gladly relieve you of any refrigerating problems that confront you. Send us a rough plan of kitchen arrangement and dimensions and our efficient corps of draughtsmen will furnish you complete blueprints and specifications and relieve you of many of the troublesome details you encounter.

Why It Pays To Visit Our Nursery in June

FIRST there are the Rhododendrons—about the size, color and bloom habit of which there is always an open discussion—come and see our foot acres in bloom and see them exactly as they are—just as we claim them to be.

Early flowering shrubs you can also see in goodly number and get a more definite line on their habits. The same is true of our Hardy Plants.

You can see our exceptional assortment of evergreens for August or September planting and look thoroughly into our shade trees in various sizes from 6 inches up to 30 feet for October planting. You can convince yourself that it pays to buy Hicks' big trees and by looking at our records see how surprisingly few, when handled Hicks' way, are not successful.

Such a visit is worth your while. It would settle many mooted questions and perhaps give you some welcome ideas and suggestions. Run down in your auto, or drop us a card and we will meet you at the station.

You Win

a client's respect and gratitude by attention to those details which go to make up a modern home. There has been no more important improvement in years than the elimination of the ash-dust nuisance, successfully accomplished by

The SHARP Rotary Ash Receiver

The only modern, sanitary way of caring for ashes, garbage and refuse. Saves time, labor, expense and dirt. No more danger of fire from hot ashes. No more litter in the basement. Can be installed under any type of heater before or after building. Read what Mr. Geo. W. Babcock, a leading business man of Louisville, Ky., says:

"Your Rotary Ash Receiver, which the writer installed in his residence, is the most satisfactory device of its kind that he has ever seen. I have spoken to numerous people concerning this device and am at a perfect loss to understand why anyone building, or anyone who has a furnace, would not install same, even after he has finished building. The ease with which the ashes are removed from the furnace, and the state of cleanliness which it makes possible in your furnace room, are two of the greatest benefits. I would not be without this ash receiver for a great deal of money, as it is without exception the most satisfactory device I have installed in my house."

You owe it to yourself and clients to get acquainted with the Sharp Rotary Ash Receiver. Fully described in Sweet's Index, 1914, pages 372 and 373.

We have some very interesting literature which we will gladly send you. Write today. Working models furnished to representatives.

THE STANLEY WORKS
NEW BRITAIN, CONN.

Efficient Ventilation at Top and Bottom Of Window

The Erie Sash Ventilator is built right into the bottom and top sash rails, without taking an inch more space than the sash itself takes.

It gives natural ventilation—the pure air coming in at the bottom and the impure air going out at the top.

The Erie Sash Ventilator is simple, substantial, economical. It is a permanent part of the sash that will last as long as the building lasts.

The shutter is mounted pivotally, opening downward, radially.

It is easily regulated.

The entire ventilator, except the rustless wire screen, is of sheet brass, which we finish to match all conventional hardware—bronze, oxidized copper, brushed brass, nickel, etc.

It is attractive, has no protruding or rattletrap contrivances to get out of order or make a noise!

It is the latest thing off the reel in sash ventilators.

Write for sample or literature.

Reliable agents wanted in every city.

Specify Equipment *for* Modern Cooking

Electricity for preparing food is growing more in favor every day. In hotels, restaurants, public buildings, etc., where this cleanly, convenient, safe method of cooking is as necessary as it is desirable, G-E cooking apparatus has been installed.

The radiant broiler shown here is especially adapted for hotel use. The heating unit is located at the top of the broiler chamber and is controlled by a spring knife switch mounted on the back of the broiler but operated from the front.

Radiant Broiler

The unit is divided into two windings; main winding consumes about 4,500 watts only when actually broiling; the auxiliary winding consumes 500 watts and is used for keeping the broiler hot between broiling operations. Considering the speed and uniformity of the broiling, the operating cost is very reasonable.

The walls of the G-E Radiant broiler are thoroughly heat insulated and the whole broiler is substantially built.

The G-E broiler is so efficient in its operation that its introduction into the hotel may be the forerunner of complete electrical equipment for the kitchen.

Send in your inquiry on any electric cooking proposition you have; our engineers will be glad to co-operate with you.

An Economical Roof Can Be Artistic

You cannot improve upon a good shingle roof, but you should, as soon think of having it unstained as you would think of leaving your house unpainted. You can save the cost and muss of staining on the job by using

"CREO-DIPT" STAINED SHINGLES

14 Grades, 16, 18, 24 inch. 25 Different Colors
They come in bundles ready to lay—one even stain, perfectly dry, ready for the job. We preserve them in Creosote, against wet or dry rot or worms. We use only selected Red Cedar shingles. You pay for no waste in either shingles or stain.

Most pleasing effect obtained by using one color on side walls and darker tone on roof. They are being used by architects, builders and owners all over the country.

Write us for catalog of CREO-DIPT Houses and Pad of Colors on Wood. CREO-DIPT Shingles last a lifetime and never need restaining!

Kellastone Your Buildings Inside and Out

The remarkable beauty and lasting qualities of Kellastone are not confined to the exterior walls.

As an interior plaster, its hardness prevents marred walls and its elasticity prevents cracking to a far greater extent than any plaster made.

As a floor covering, Kellastone Composition Flooring is abrasion proof and possesses a remarkable degree of resiliency. It is absolutely sanitary, waterproof and fireproof. Can be easily cleaned and does not become slippery. As an exterior stucco, time has proven that

KELLASTONE

IMPERISHABLE STUCCO

is in a class by itself. It contains no Portland cement or lime. Through rain or snow—zero weather or blistering sun—Kellastone stucco will always retain its color and beauty.

When buildings settle, Kellastone "gives" with the building without cracking to a far greater extent than any other form of stucco.

It will adhere successfully to stone, brick or wood, thus proving an invaluable covering for remodeling old buildings as well as for new structures.

Kellastone is a non-conductor of heat, cold and dampness. In summer, it makes rooms cool and comfortable. In winter, it reduces fuel bills.

We have published two interesting booklets. One shows the advantages of Kellastone Imperishable Stucco for exterior and interior use. The other relates to Kellastone Composition Flooring. Either or both of these booklets will be gladly sent to any address.

The Honeywell Unique Hot Water Radiator Valve.

With this Valve it is only necessary to connect to ONE end of the Radiator.

Architects Recognize True Merit And That Alone

Simply that a device—or a method is **new** is not sufficient recommendation to win recognition for it from the architectural fraternity.

Its merit must be **unmistakable**—its superiority **marked**—to be accepted and approved by the keen, discern-

ing men who are leaders in the field of modern architecture.

For that reason—the rapid and wide spreading popularity of the hot water heating system perfected by our Mr. M. C. Honeywell—the

Honeywell System of Hot Water Heating

—the fact that the demand for it from the architects of the world has compelled the erection of branch Honeywell manufacturing establishments in Montreal, Canada and Birmingham, England—must mean much to every architect who is facing any kind of a heating problem.

The higher order of efficiency—the decidedly greater economy of installation and upkeep—the remarkable sightliness of the Honeywell System all appeal to architects seeking the best.

Our new Manual for Architects, Heating Engineers and Builders is Ready.

This 160-page manual on the installation of hot water heating plants is a desk book of value for daily reference—an exposition of that which is concrete in heating system truths.

Why Kelsey Heat Has Health on Its Side

FIRST and most important it is a fresh air heat—fresh air straight from outside, heated to an agreeable temperature, then mixed with the desirable amount of moisture and delivered directly to your rooms in large volumes.

It's heat without that fierce drying out objection of either steam or water—the kind that pulls your furniture apart and is agreed by physicians to be anything but healthy.

It's both the re-heating and the over heating of the air in radiator heated rooms, that gives you so much of that drowsy feeling nights when you try to read.

Kelsey fresh air heat, does not stagnate the system—it stimulates it.

Ventilation by windows or doors, means draughts and discomforts. Kelsey heat means a delightfully comfortable warmth with ample ventilation free from draughts.

Think what rooms heated and ventilated with a Kelsey mean to children or to those ailing ones of your family.

The Kelsey also has economy on its side.

It's both an economizer and a healthizer. Ask for catalog.

The "RICHARDSON" Grate makes operation sure at all times and reduces labor to a minimum. Means easy riddance of clinkers and insures continuous draft.

Large double clean-out doors and accessibility to all parts of boiler permit easy cleaning and afford maximum efficiency.

ECONOMY

IN

Richardson Boiler Construction

"RICHARDSON" design is such as to secure an effective and positive distribution of the products of combustion to all parts of the boiler. The flames pass three times the full length of the boiler, constantly in contact with water heating surfaces, so arranged as to absorb to the fullest extent the products of the fuel consumed.

The thin water ways cause a rapid internal circulation of the water over the heated surfaces, also being so arranged as to completely absorb the products of the consumed fuel.

Architects and Heating Engineers will find pages 1330-1335 of *SWEET'S CATALOGUE* interesting.

Quality

Applied to Heating—

WHENEVER the Architect and the Owner get together on the heating question, the qualifications of the "Smith Quality" line are discussed—unconsciously, perhaps, because they may not be aware that the points of design, economy, workmanship and efficiency which they desire are all represented by our products. This is sometimes unfortunate, because while other lines may be equally good, they often are not.

We would like every Architect and Owner at least to know that we want to help them decide what to specify and buy, and also that we will co-operate with their Heating Contractor to see that they get proper installations.

DUPLEX CONE FANS

are guaranteed to maintain any pressure that might be required in any system of heating and ventilating.

This is one of many reasons why architects and engineers insist on them in their plans for

Hospitals, Public Buildings,
Asylums, Factories,
Palatial Hotels, etc.

Another point in their favor: They occupy less floor space and produce equal pressures with any centrifugal fan made for the purpose.

PURE AIR IS A NECESSITY, NOT A LUXURY

Our new catalog, containing tables of speeds, capacities, pressures and power requirements, is yours for the asking. A necessity in every office where heating and ventilating plans are laid.

These fans are manufactured and installed by the patent holders.

HOWARD & MORSE
NEW YORK CITY

Vapor Heating

MOLINE SYSTEM

A CERTAIN Chicago architect was censured by a client because a **steam** heating system which he had "specified" pounded. As a matter of fact the client had requested a steam heating, and the architect had merely "specified" the best steam system he knew of.

Another architect went through a similar experience with **hot water**—because it proved too "slow."

Of course the censure in both cases was unjust. Steam **will** pound, and hot water can heat only so fast.

Perhaps you've had experience of this kind. Whether you have or not, you'll be interested in the Moline Vacuum Vapor System, because it can't pound, is just as "quick" as hot air—and operates naturally without pumps, traps or automatic radiator valves.

You can specify the Moline System **with absolute assurance**. Interesting literature, proof and proposition free on request.

The Architect
appreciates
daylight

The Builder
should—he does
when he knows
its value

DODD, MEAD & CO., N. Y.

"I want daylight in my work."

How often do you hear this or a similar expression, and how much importance is there back of it? How often is a tenant lost because of lack of daylight — how more often can a good one be had because of its presence?

How much more rental does a daylighted space represent over a dark one? How much artificial daylight is saved through daylight?

Daylight worth is tangible, definite and proven — not imaginative nor speculative. Architects know this, therefore we repeat it to them. They appreciate its value, therefore we remind them of it. They are in a position to prescribe the method that will produce Daylight, therefore we present it to them.

Luxfer

reflects Daylighting into dark places — it delivers it with scientific accuracy. It has done so for a quarter of a century. Let us help you daylight your dark space problems. Our Experts will cooperate with you and prescribe for your specific conditions. Write us.
